올림포스 영어 9강 ~ 16강 (13강 제외)

|       |                                         |
|-------|-----------------------------------------|
| 문항 구성 | 객관식 18문항(각 4점) + 논술형 2문항(각 14점)         |
| 지문 수  | 총 10개 지문, 지문당 2문항                       |
| 답안 표기 | 객관식은 OMR 또는 답안지에 번호 표기, 논술형은 답안란에 직접 서술 |

1 본 시험지는 총 20문항(13쪽)이며, 페이지 하단의 쪽 번호를 확인하시오.

2 논술형 문항은 조건을 정확히 지켜 작성해야 점수가 인정된다.

3 문제지와 답안지에 학년·반·번호·이름을 정확히 기재하시오.

4 시험 종료 후 문제지와 답안지를 모두 제출한다.

[1~2] 다음 글을 읽고 물음에 답하시오.

Action takes place by choosing which ends shall be satisfied by the employment of means. Time is scarce for man only because whichever ends he chooses to satisfy, there are others that must remain unsatisfied. When we must use a means so that some ends remain unsatisfied, the necessity for a choice among ends arises. For example, Jones is engaged in watching a baseball game on television. He is faced with the choice of spending the next hour in: (a) continuing to watch the baseball game, (b) playing bridge, or (c) going for a drive. He would like to do all three of these things, but his means (time) is insufficient. As a result, he must choose: one end can be satisfied, but the others must go unfulfilled. Suppose that he decides on course A. This is a clear indication that he has ranked the satisfaction of end A higher than the satisfaction of ends B or C.

1. 다음 글의 제목으로 가장 적절한 것은? [4점]

- |                                            |                                            |
|--------------------------------------------|--------------------------------------------|
| ① Choice and Scarcity: Ranking Our Ends    | ② The History of Television Entertainment  |
| ③ Bridge versus Baseball: A Modern Dilemma | ④ Why Driving Is the Best Use of Free Time |
| ⑤ The Economics of Sports Broadcasting     |                                            |

2. 다음 글에서 전체 흐름과 관계 없는 문장은? [4점]

① Time is scarce for man only because whichever ends he chooses to satisfy, there are others that must remain unsatisfied. When we must use a means so that some ends remain unsatisfied, the ② necessity for a choice among ends arises. ③ Many people enjoy watching baseball games during their leisure time. For example, Jones is engaged in watching a baseball game on television, faced with the choice of three activities. ④ This is a clear indication that he has ranked the satisfaction of end A higher than the satisfaction of ends B or C. ⑤

[3~4] 다음 글을 읽고 물음에 답하시오.

Environmental stresses cause changes in the genetic makeup of a population by favoring certain gene variants more than others. This is, in fact, the normal way that populations can adapt rapidly to changes in their environment without mutations being required to produce new adaptations. It is also the reason why populations with genetic diversity are more likely to survive in the face of change. However, there is another side of this phenomenon related to human impacts on populations. Toxins added to the environment create selection pressure for individuals that are more tolerant of the toxins. One negative impact of this is that it can reduce the genetic diversity of a population. Another problem occurs if the organism is a pest and the toxin is contained in, for example, a pesticide. As a result of the selection pressure, the population seems to develop tolerance to the toxin. The pesticide then becomes less effective.

3. 다음 글의 요지로 가장 적절한 것은? [4점]

- ① Toxins create selection pressure that reduces genetic diversity and can make pests more tolerant, weakening pesticide effectiveness.
- ② Genetic diversity is irrelevant to a population's ability to survive environmental change.
- ③ Mutations are necessary for any population to adapt to its environment.
- ④ Pesticides become more effective over time as pests are exposed to them repeatedly.
- ⑤ Environmental stress always increases genetic diversity within a population.

4. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은? [4점]

Environmental stresses cause changes in the genetic makeup of a population by ①favoring certain gene variants more than others. This is, in fact, the normal way that populations can adapt rapidly to changes in their environment without mutations ②being required to produce new adaptations. It is also the reason why populations with genetic diversity are more likely ③survive in the face of change. ... the population seems ④to develop tolerance to the toxin. The pesticide then becomes ⑤less effective.

- ① favoring
- ② being required
- ③ survive
- ④ to develop
- ⑤ less

[5~6] 다음 글을 읽고 물음에 답하시오.

Our complex brains might have evolved to establish strong social bonds, but defining what should be part of that social group appears to be rather flexible. For instance, some people treat their pets as if they are members of their family, and believe they can relate to the pets' needs, desires, fears and dreams. Others see animals as distinct from humans and wouldn't think of talking to one as if it was a friend. Many people keep the ashes of a deceased loved one nearby, believing those ashes continue to serve as some link to their existence. Even if inanimate objects don't have a distinct personality, many of us still attribute certain human characteristics to non-human objects or beings, such as pets, dolls or even cars and memorabilia.

5. 다음 글의 주제로 가장 적절한 것은? [4점]

- ① humans often extend family-like or social feelings to non-human entities
- ② pets should always be treated as full family members
- ③ only psychologically unstable people personify objects
- ④ ashes of the deceased have no emotional value
- ⑤ animals and humans share identical social instincts

6. 밑줄 친 **their**가 가리키는 것으로 가장 적절한 것은? [4점]

"Many people keep the ashes of a deceased loved one nearby, believing those ashes continue to serve as some link to **their** existence."

- ① the deceased loved one
- ② the people who keep the ashes
- ③ the pets mentioned earlier
- ④ the inanimate objects in general
- ⑤ memorabilia collectors

[7~8] 다음 글을 읽고 물음에 답하시오.

At one end of the spectrum of transformations was the forest gardening as practiced by the peoples of New Guinea and Amazonia that mimicked natural growth and left minimal traces on the land. At the other end was monoculture: cultivating only one species of plant or raising only one species of animal. The beginnings of monoculture can be seen in the wheat fields of the Middle East, the rice paddies of China, and the herds of sheep and goats on the Eurasian steppe. Biologically speaking, these species suddenly became very successful, measured by their rates of survival and reproduction. So did other, unwanted species. Crops that ripened or were stored after harvesting attracted rats, mice, sparrows, and roaches. Water pools provided habitats for mosquitoes. Garbage and human or animal waste attracted flies. Thanks to humans, weeds and pests were also biological winners.

7. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은? [4점]

"Crops that ripened or were stored after harvesting attracted rats, mice, sparrows, and roaches. Water pools provided habitats for mosquitoes. Garbage and human or animal waste attracted flies. Thanks to humans, \_\_\_\_\_."

- ① weeds and pests were also biological winners
- ② monoculture eliminated all unwanted species
- ③ forest gardening became the dominant practice again
- ④ biodiversity increased dramatically across all species
- ⑤ wild animals returned to their natural habitats

8. 다음 글의 내용과 일치하지 않는 것은? [4점]

- ① Forest gardening left minimal traces on the land.
- ② Monoculture involves cultivating many different species together.
- ③ Wheat, rice, sheep, and goats are examples of early monoculture.
- ④ Stored crops attracted pests like rats and roaches.
- ⑤ Pools of water created habitats for mosquitoes.

[9~10] 다음 글을 읽고 물음에 답하십시오.

The reason pessimists often sound smart is that they can avoid being 'wrong' by moving the goalposts. When a doomer predicts that the world will end in five years, and it doesn't, they just shift the date. The American biologist Paul R. Ehrlich — author of the 1968 book *The Population Bomb* — has been doing this for decades. In 1970 he said that 'sometime in the next 15 years, the end will come. And by "the end" I mean an utter breakdown of the capacity of the planet to support humanity.' Of course, that was terribly wrong. He had another go: he said that 'England will not exist in the year 2000.' Wrong again. Ehrlich will keep pushing this deadline back. A pessimistic stance is a safe one.

9. 밑줄 친 **this deadline**이 가리키는 것으로 가장 적절한 것은? [4점]

- ① the date by which Ehrlich predicts disaster or collapse will occur
- ② the publication date of *The Population Bomb*
- ③ the year England was founded
- ④ the deadline for submitting scientific papers
- ⑤ the date of the next presidential election

10. 다음 글을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은? [4점]

"Pessimists like Ehrlich maintain credibility by (A)\_\_\_\_\_ their failed predictions rather than (B)\_\_\_\_\_ that they were wrong."

- ① (A) postponing – (B) admitting
- ② (A) admitting – (B) postponing
- ③ (A) publishing – (B) ignoring
- ④ (A) forgetting – (B) revealing
- ⑤ (A) confirming – (B) denying

[11~12] 다음 글을 읽고 물음에 답하시오.

Of all the colours of the rainbow the one that makes the greatest impact on the eye is red. There is something instantly arresting about the colour of fire and danger. It is charged with alarm and urgency. We have red fire engines, red warning lights and the Red Cross. If we want something to be seen from a distance, such as a post box or (formerly) a telephone kiosk, we paint it red. Perhaps it is because red is so obvious that few wild animals are truly red: even the so-called Red Squirrel and the Red Deer are really shades of reddish-brown that conceal rather than advertise. Relatively few butterflies are red either. In Britain, and indeed, in all mainland Europe, only one species has a pattern of full-on bright red, like a splash of blood: the Red Admiral.

11. 다음 글의 주제로 가장 적절한 것은? [4점]

- ① red is a visually powerful color associated with alarm, yet it is rare among wild animals because it fails to provide camouflage
- ② all wild animals avoid the color red entirely
- ③ the Red Admiral butterfly is the only red creature on Earth
- ④ red is used in nature exclusively as a warning color
- ⑤ humans invented the color red for safety purposes

12. [논술형] 다음 글의 빈칸에 들어갈 말을 <조건>에 맞게 영작하시오. [14점]

<보기>

[A] visually striking and impossible to ignore / completely invisible at a distance

[B] rarely found among wild animals / found in every wild animal species

<조건>

- <보기>에 있는 구절을 각 1개씩 선택하여 사용할 것
- 정확한 어법과 어휘를 사용할 것
- 주어진 구절(Red is~)을 포함하여 하나의 문장으로 쓸 것(두 문장 이상 작성 시 맨 처음 문장만 채점)

Red is \_\_\_\_\_.

[13~14] 다음 글을 읽고 물음에 답하시오.

Forecasters who predict resource depletion often ignore or underestimate the power of markets. For example, some forecasters use a current reserve index to estimate how long a resource would last. The current reserve index divides the current known reserve of a resource by the amount currently used each period. So, if we know of 445 billion barrels of oil, and we are currently using 15 billion barrels per year, the index indicates that we will run out of oil in about 30 years. Some studies, like the *Limits to Growth*, further assume that demand will increase each year, thus depleting resources even faster. But what they fail to see is that if markets are allowed to do their usual duty, that is, prices rise as depletion occurs, resources will last much longer.

13. 다음 글의 요지로 가장 적절한 것은? [4점]

- ① Predictions of resource depletion are often flawed because they ignore how rising prices can slow consumption and extend a resource's lifespan.
- ② The current reserve index always gives a perfectly accurate prediction.
- ③ Markets have no influence on the rate at which resources are depleted.
- ④ Demand for resources never increases over time.
- ⑤ The *Limits to Growth* study proved that resources will last forever.

14. 다음 글에서 전체 흐름과 관계 없는 문장은? [4점]

①Forecasters who predict resource depletion often ignore or underestimate the power of markets. ②For example, some forecasters use a current reserve index to estimate how long a resource would last. ③Renewable energy sources like solar power have become significantly cheaper in recent decades. ④So, if we know of 445 billion barrels of oil, and we are currently using 15 billion barrels per year, the index indicates that we will run out of oil in about 30 years. ⑤If markets are allowed to do their usual duty, resources will last much longer.

[15~16] 다음 글을 읽고 물음에 답하시오.

The ability to detect visual movement played an interesting role in the history of astronomy. In 1930, Clyde Tombaugh was searching the skies for a possible undiscovered planet beyond Neptune. He photographed each region of the sky twice, several days apart. Stars essentially remain unmoving in photos, while a planet moves from one photo to the next. However, how would he find a small dot that moved among all the countless unmoving dots in the sky? He put each pair of photos on a machine that would flip back and forth between one photo and the other. When he came to one pair of photos, he immediately noticed one dot moving as the machine flipped back and forth. He identified that dot as Pluto, which astronomers now list as a dwarf planet.

15. 주어진 문장 다음에 이어질 글의 순서로 가장 적절한 것은? [4점]

주어진 문장: "The ability to detect visual movement played an interesting role in the history of astronomy."

(A) He photographed each region of the sky twice, several days apart. Stars essentially remain unmoving in photos, while a planet moves from one photo to the next.

(B) In 1930, Clyde Tombaugh was searching the skies for a possible undiscovered planet beyond Neptune.

(C) However, how would he find a small dot that moved among all the countless unmoving dots in the sky? He put each pair of photos on a machine that would flip back and forth between one photo and the other. When he came to one pair of photos, he immediately noticed one dot moving as the machine flipped back and forth. He identified that dot as Pluto, which astronomers now list as a dwarf planet.

① (A)-(B)-(C)

② (A)-(C)-(B)

③ (B)-(A)-(C)

④ (B)-(C)-(A)

⑤ (C)-(A)-(B)

16. 밑줄 친 **that dot**이 가리키는 것으로 가장 적절한 것은? [4점]

"He identified **that dot** as Pluto, which astronomers now list as a dwarf planet."

① the dot that appeared to move between the two photographs taken several days apart

② a star that remained perfectly still in the photographs

③ Neptune, which Tombaugh was originally searching for

④ a flaw in the camera lens

⑤ the machine used to flip between photos

[17~18] 다음 글을 읽고 물음에 답하시오.

Many people excuse perfectionism at work by claiming it is professionalism. Differentiating between the two is useful. Managing perfectionism does not mean dropping critical standards. ( ㉠ ) It becomes a problem when your personal expectations become unmanageable, self-imposed demands that create more pressure than is needed. ( ㉡ ) What are the acceptable standards of professionalism in your work and how do these compare with your own? ( ㉢ ) With the busyness of workplaces these days, trying to achieve a benchmark of 110% perfect on everything can be a recipe for burnout. ( ㉣ ) If you are a manager expecting this of others, you may be setting yourself up for failure. ( ㉤ )

17. 다음 글에서 주어진 문장이 들어갈 위치로 가장 적절한 것은? [4점]

주어진 문장: "It is not permission for work sloppiness or low standards; rather it means spending less time on tasks that do not need the level of input you are providing."

- |   |   |
|---|---|
| ㉠ | ㉡ |

18. [논술형] 다음 질문에 대한 답을 본문에서 찾아 쓰시오. (본문에 있는 표현을 변형 없이 그대로 사용할 것) [14점]

Q. What percentage benchmark does the passage mention as an unhealthy goal that can lead to burnout?

A: \_\_\_\_\_

\_\_\_\_\_

[19~20] 다음 글을 읽고 물음에 답하시오.

One common misunderstanding of evolution is that it leads inexorably to organisms that are ever better designed. But Darwinian evolution is not a process of perfection. In contrast to the Lamarckian and Great Chain of Being theories of evolution, natural selection does not inexorably drive species up some kind of ladder of perfection. Rather, natural selection is, to borrow a term from economics, a process that leads to satisficing (just being "good enough for now"). In other words, so long as you survive and do better than your rivals, that is good enough. An antelope does not have to become the fastest animal on earth; it simply has to be faster than the lions that try to catch it. By the same token, lions and other predators do not have to be able to run marathons at top speed; nor do they have to be able to catch every prey animal. They just have to be fast enough to catch sufficient prey animals to survive.

19. 다음 글의 주제로 가장 적절한 것은? [4점]

- ㉠ natural selection favors organisms that are merely "good enough" to survive and outcompete rivals, not those that are perfectly designed
- ㉡ evolution always produces perfectly designed organisms over time
- ㉢ antelopes are the fastest animals because of natural selection
- ㉣ lions are unable to catch any prey due to evolutionary limits
- ㉤ the Great Chain of Being theory is scientifically proven

20. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은? [4점]

One common misunderstanding of evolution is that it leads inexorably to organisms that are ever ㉠better designed. But Darwinian evolution is not a process of ㉡perfection. Rather, natural selection is, to borrow a term from economics, a process that leads to satisficing (just being "good enough for now"). In other words, so long as you survive and do ㉢worse than your rivals, that is good enough. An antelope does not have to become the fastest animal on earth; it simply has to be ㉣faster than the lions that try to catch it. ... They just have to be fast ㉤enough to catch sufficient prey animals to survive.

## 논술형 정답

### 12. [11강 PRACTICE 03]

Red is visually striking and impossible to ignore, so it is rarely found among wild animals.

해설: 빨간색은 시각적으로 강렬해 눈에 띄므로(visually striking and impossible to ignore) 위장이 필요한 야생동물에게는 드물게 나타난다(rarely found among wild animals).

### 18. [15강 PRACTICE 02]

110% (a benchmark of 110% perfect on everything)

해설: 본문에 "a benchmark of 110% perfect on everything"이라고 명시되어 있다.
